Arts and Media/Mass Communication and Media Arts Courses

Arts and Media/Mass Communication and Media Arts Courses Courses

AM400 - Artificial Intelligence in Arts and Media Colloquium-based course wherein students will learn how SIUC faculty think about and use Artificial Intelligence in their teaching and research. The invited professors will focus on the various dimensions of the revolution in computational technologies as they pertain to academic disciplines in the College of Arts and Media. The course uses academic methods (such as critical and cultural studies) to interrogate various art generators, from text (such as ChatGPT), to image (i.e., Dall-e 2, Craiyon), to music (such as Suno), and beyond. Guided by a vast array of SIUC?s most talented faculty members, students will learn how to think beyond the limitations of academic disciplines, ranging across the arts, sciences, and humanities.
